

- With the help of tags you can do research better or you can manage your personal projects and todo lists.
- The application persists the tags in the file names. As a consequence, this meta information is not vendor locked and can be used even without TagSpaces. The absence of a database, makes syncing of the tag meta information easy across different devices with cloud services like Dropbox. In the PRO version we have added an alternative way for tagging based on [sidecar files](#).
- TagSpaces features basic file management operations, so it can be used as simple file manager supporting [file tagging](#). In the PRO version you can in addition assign tags to folder and [annotate](#) files and folders with markdown.
